

Introducing PPAP Creator, a revolutionary software that outputs your CMM data directly into a PPAP format. Capable of %100 automation eliminating human error, PPAP Creator will reduce the report time to seconds instead of days. Standard reporting includes ISO/IEC 17025 and QS CFG-1003 compliant formats.

The CMM data analysis package enables your operator to generate reports everyone can understand in a matter of seconds. Step Ahead combines layout and capability reporting with capability charting in an easy to read format that gives managers, engineers and quality personnel all the data needed to make critical decisions. Step Ahead will revolutionize and simplify how your CMM Data is collected, analyzed, and reported.

CMM TRAINING VIDEO COURSES

GEOMEASURE VIDEO COURSE & MCOSMOS VIDEO COURSE

The Video Training Course is designed to take new employees from the very basics to the most advanced applications used in this software. All lectures are filmed, and each section of the step-by-step instruction manual has a video clip, which follows along with the exercises in the manual as the programs are written. Using a special media player, your programmer actually sees the Geomeasure or Mcosmos screen and hears an explanation of each step and each screen in detail.

The course begins with the basics including explanations of the XYZ axis. And it finishes with variable declarations using high-level language to do conditional branching.

The course comes complete with:

The Basic Programming Manual
The Advanced Programming Manual
6 CDROMS with video clips and lectures
1 Aluminum Inspection Block with prints

CUSTOMER TESTIMONIALS

“The video course was perfect for our company. We are a small machine shop and don’t use the machine everyday, so it was difficult to remember everything we needed to know to check parts. Now we just throw a CD in the computer and in ten minutes we are ready to check whatever we need to. Its laid out really well and you can get right to where you need to be.”

Larry Cook
Tryco Machine Works

“We had Bill Dyer come out and do a week of training. The video course was included in the training and the class was completely hands on training. It was great, and I am now able to use the course to train additional programmers myself. That was the last time we needed to spend money on training regardless of turnover.”

Dan Corte
Kaysun

“I bought the video course several years ago and it is amazing. Not only did it show me how to write a CMM program, but Bill talks about common mistakes and potential problems as he is explaining the steps. It is like he was thinking out loud. I recommend this course to anyone who has a CMM.”
